EXHIBIT 16

Entropic Communications, LLC v. Comcast Corp., et al.
Case 2:23-cv-01050-JWH-KES (C.D. Cal.)

U.S. Patent No. 11,399,206 (the “’206 Patent”) Exemplary Infringement Chart

Comcast operates and maintains a nationwide television and data network through which it sells, leases, and offers for sale products and services, including the Technicolor TC8717 cable modem, Technicolor CGM4140 cable modem, Technicolor CGM4331 cable modem, and products that operate in a similar manner (“Accused Cable Modem Products”), as well as the Arris AX013ANC STB, Arris AX013ANM STB, Arris AX014ANC STB, Arris AX014ANM STB, Arris MX011ANC STB, Arris MX011ANM STB, Pace PX013ANC STB, Pace PX013ANM STB, Pace PX022ANC STB, Pace PX022ANM STB, Samsung SX022ANC STB, Samsung SX022ANM STB, and products that operate in a similar manner (“Accused Set Top Products”). Comcast provides cable television and internet services (“Accused Services”) via the lease, sale, and/or distribution of the Accused Cable Modem Products and/or the Accused Set Top Products. Comcast literally and/or under the doctrine of equivalents infringes the claims of the ’206 Patent by making, using, selling, offering for sale, and/or importing the Accused Services, Accused Cable Modem Products, and/or the Accused Set Top Products.

As shown below in the chart with exemplary support, the Accused Services infringe at least claims 13, 14, 19, 21, 23, 25, 26, 31, 34, 35, 38, 39, 44, 47, and 48 of U.S. Patent No. 11,399,206 (“’206 Patent”). The ’206 Patent was filed January 28, 2022, issued July 26, 2022, and is entitled “Method for Receiving a Television Signal.” The ’206 Patent claims priority to U.S. Patent Application Serial No. 17/217,244, filed on Mar. 30, 2021; U.S. Patent Application Serial No. 16/430,506, filed on Jun. 4, 2019; U.S. Patent Application Serial No. 15/792,318, filed Oct. 24, 2017; U.S. Patent Application Serial No. 14/948,881, filed Nov. 23, 2015, U.S. Patent Application Serial No. 14/617,973, filed on Feb. 10, 2015; U.S. Patent Application Serial No. 13/962,871, filed on August 8, 2013; U.S. Patent Application Serial No. 12/762,900, filed on April 19, 2010; and U.S. Provisional Patent Application No. 61/170,526, filed April 17, 2009.

The Accused Services perform the claimed methods using, for example, the Accused Set Top Products and/or the Accused Cable Modem Products. The Accused Services infringe the claims of the ’206 Patent, as described below, either directly under 35 U.S.C. § 271(a), or indirectly under 35 U.S.C. §§ 271(b)–(c).

Entropic Communications, LLC v. Comcast Corp., et al.
Case 2:23-cv-01050-JWH-KES (C.D. Cal.)

#	U.S. Patent No. 11,399,206	Accused Products and Services
13pre	13. A method comprising:	<p>The Accused Services are provided by the claimed system by utilizing, for example, the Accused Set Top Products, which include at least one set top box (“STB”) located at each subscriber location, including, for example, the Arris AX013ANC STB, Arris AX013ANM STB, Arris AX014ANC STB, Arris AX014ANM STB, Arris MX011ANC STB, Arris MX011ANM STB, Pace PX013ANC STB, Pace PX013ANM STB, Pace PX022ANC STB, Pace PX022ANM STB, Samsung SX022ANC STB, Samsung SX022ANM STB, and products that operate in a similar manner, and/or the Accused Cable Modem Products including, for example, the Technicolor TC8717 cable modem, Technicolor CGM4140 cable modem, Technicolor CGM4331 cable modem, and products that operate in a similar manner, located at each subscriber location.</p> <p>By way of example, the Technicolor CGM4140 cable modem is charted herein. As described below, the Technicolor CGM4140 has a Broadcom BCM3390 SoC. On informed belief, all cable modems deployed by or enabled by Comcast that contain the BCM3383, BCM3384, and BCM33843 series chips operate substantially the same as the BCM3390 series chips for purposes of the ’206 Patent. As there are no functional differences between the BCM33843 SoC and BCM3390 SoC that impacts infringement of the ’206 Patent, documents describing the operation of the BCM33843 SoC equally describe the operation of the BCM3390 SoC.</p> <p>Therefore, the Technicolor CGM4140 is representative of all Accused Set Top Products and Accused Cable Modem Products, including those having BCM3383, BCM3384, BCM33843, or BCM3390 SoCs.</p> <p>Discovery will provide detailed information regarding implementation and identification of the specific components, source code, software and/or other instrumentalities used to implement the claimed method. As additional information is obtained through discovery related to the Accused Services and related instrumentalities, Entropic will supplement these contentions.</p>
13a	receiving an input signal from a cable network;	The Accused Set Top Products and the Accused Cable Modem Products receive an input signal from a cable network as described below.

Entropic Communications, LLC v. Comcast Corp., et al.
Case 2:23-cv-01050-JWH-KES (C.D. Cal.)

#	U.S. Patent No. 11,399,206	Accused Products and Services
		<p>Specifically, the Technicolor CGM4140 has applicable circuitry and/or software modules constituting wideband ADC, see 13b below. For example, the Technicolor CGM4140 has a Broadcom BCM3390 SoC, highlighted in red below. The Technicolor CGM4140 has at least one RF connector, highlighted in blue, operable to receive an input signal from a cable network.</p> <div data-bbox="743 451 1755 1344"><p>The image consists of two photographs of a green printed circuit board (PCB). The left photograph shows a central integrated circuit (IC) highlighted with a red rectangular box. The IC is a Broadcom BCM3390 SoC, with its part number and manufacturer clearly visible. Below this box, the text 'BCM3390 SoC' is written in red. The right photograph shows the same PCB from a different angle, focusing on the bottom edge where several connectors are located. One of these connectors, an RF connector, is highlighted with a blue rectangular box. Below this box, the text 'RF Input' is written in blue.</p></div>

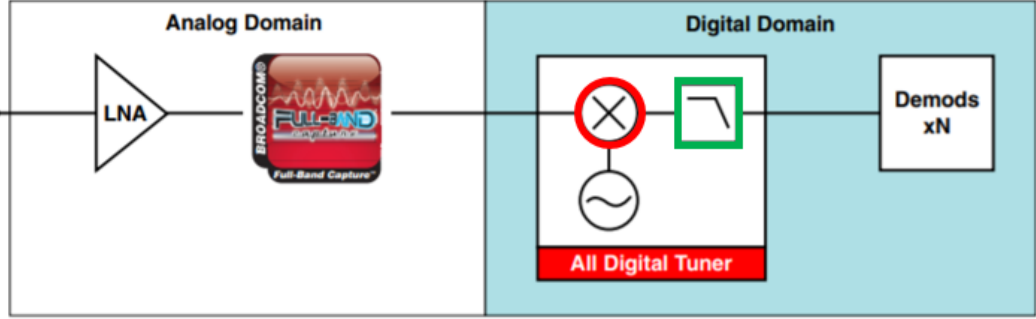

Entropic Communications, LLC v. Comcast Corp., et al.
Case 2:23-cv-01050-JWH-KES (C.D. Cal.)

#	U.S. Patent No. 11,399,206	Accused Products and Services
		Discovery will provide detailed information regarding implementation and identification of the specific components, source code, software and/or other instrumentalities used to implement the claimed method. As additional information is obtained through discovery related to the Accused Services and related instrumentalities, Entropic will supplement these contentions.
13b	digitizing all received channels in the input signal via a wideband analog-to-digital converter (ADC), wherein the received channels comprise a plurality of desired channels and a plurality of undesired channels;	<p>The Accused Set Top Products and the Accused Cable Modem Products digitize said received signal to generate a digitized signal.</p> <p>The Technicolor CGM4140 includes applicable circuitry and/or software modules providing a wideband ADC, for example a Broadcom BCM3390 SoC. The Technicolor CGM4140 receives the entire ~1GHz downstream spectrum of a Comcast cable plant. The entire downstream spectrum includes received channels, including desired and undesired channels. The Technicolor CGM4140, using its applicable circuitry and/or software modules, digitizes the received signal to generate a digitized signal.</p> <p>“The new BCM3384 DOCSIS®/Euro-DOCSIS™ 3.0 cable gateway SoC combines Broadcom's Full-Band Capture (FBC) digital tuning technology with remote diagnostics, dual-band concurrent Wi-Fi, a custom, dedicated applications processor and integrated DECT 6.0 CAT-iq 2.0. ... Broadcom’s new BCM33843 is pin compatible ... Broadcom is now sampling [as of Jan 08, 2031] the BCM3384 and BCM33843” (ENTROPIC_COMCAST_002035 at ENTROPIC_COMCAST_002036)</p> <p>“Full-Band Capture digital tuning technology and remote diagnostics: Integrated on-chip technology directly samples and digitizes the entire 1GHz downstream spectrum of a cable plant, providing access to any channel anywhere. Remote diagnostics provides real time, unobtrusive diagnostic and spectrum analysis capabilities, without effecting user service on any of the 24 downstream channels.” (ENTROPIC_COMCAST_002035 at ENTROPIC_COMCAST_002037)</p>

Entropic Communications, LLC v. Comcast Corp., et al.
Case 2:23-cv-01050-JWH-KES (C.D. Cal.)

#	U.S. Patent No. 11,399,206	Accused Products and Services
		Discovery will provide detailed information regarding implementation and identification of the specific components, source code, software and/or other instrumentalities used to implement the claimed method. As additional information is obtained through discovery related to the Accused Services and related instrumentalities, Entropic will supplement these contentions.
13c	digitally down converting each desired channel, of the plurality of desired channels, to generate a plurality of digital channel outputs; and	<p>The Accused Set Top Products and the Accused Cable Modem Products digitally down convert each desired channel, of the plurality of desired channels, to generate a plurality of digital channel outputs as described below.</p> <p>Specifically, the Technicolor CGM4140 includes has applicable circuitry and/or software modules constituting a mixer module operating on the digitized signal. For example, the applicable circuitry and/or software modules of the Technicolor CGM4140 utilize advanced signal processing techniques, including a mixer, which can be used to digitally downconvert the plurality of desired channels. For example, the Technicolor CGM4140 receives an analog signal that creates a digital representation of the entire 1GHz downstream spectrum of the input signal. The composite broadband signal contains a plurality of received channels, some of which are desired channels and some of which are undesired channels. The Technicolor CGM4140 tunes the resulting series of binary values within the composite digital broadband signal, and shifts (i.e., downconverts) the frequency of the channels desired to baseband, which constitutes the digital channel outputs. For example, as described below, applicable circuitry and/or software modules of the Broadcom BCM3390 SoC includes a mixer module (highlighted below in red) and a filter (highlighted below in green) used to frequency shift (i.e., downconvert) the digitized channels in the digitized input signal from a higher frequency to a lower frequency (i.e., a baseband frequency).</p>
